

TO: PSA ATHLETES and MEMBER NATIONS

WADA PROHIBITED LIST 2018

The 2018 Prohibited List will be effective 1 January 2018. As usual there are some changes.

Below is a synopsis of the major modifications. Those of particular relevance have been bolded. Refer to the list for the names of drugs added.

A. Substances and Methods prohibited at all times (In-and Out-of-Competition)

Prohibited Substances:

S1: Anabolic Steroids

- Renaming and some additions to the list

S2: Peptide Hormones, Growth Factors, Related Substances and Mimetics:

- **Vitamin B12, which contains cobalt, is not prohibited**
- Some additions to the list.

S3: Beta 2-Agonists i.e. the non-corticosteroid medication found in many asthma inhalers (e.g. salbutamol, salmeterol, formoterol, which are not banned if taken as per prescribed)

- **Dosing parameters of salbutamol were revised to make it clear that divided doses of salbutamol may not exceed 800 micrograms over any 12 hours. There is a maximum of 1600 micrograms over 24 hours but not to exceed 800 micrograms over 12 hours.**
- **Tulobuterol was added as an example of an accepted Beta 2-Agonist**
- **Note: Terbutaline, which is commonly prescribed is still banned**
- The statement on the urinary thresholds was improved

S4: Hormone and Metabolic Modulators

- a few additions

S5: Diuretics and Masking Agents:

- Glycerol has been removed from the list.

Prohibited Methods:

Chemical and Physical Manipulation:

M2: The permitted volume and timing of intravenous infusions were changed from infusions of no more than 50ml per 6 hour period, to no more than 100ml per 12 hour period in order to allow greater flexibility for the safe administration of non-prohibited therapeutic substances such as iron.

- To reflect medical practice, "hospital admission" has been changed to "hospital treatments" and "clinical investigations" has been as "clinical diagnostic investigations".

M3: Gene Doping

- The definition has been revised to include current and emerging gene manipulating technologies.

Substances and Methods Prohibited In-Competition:

S6: Stimulants:

- **1,3-Dimethylbutylamine was added as an example. This substance can be found in some dietary supplements.**

S6: Cannabinoids:

- The category Cannabimimetics e.g. "Spice, JWH-018, JWH-073, HU210" was changed to "synthetic cannabinoids e.g. tetrahydrocannabinol (THC) and other cannabinoids".
- The synthetic cannabinoids are one of the main classes of psychoactive substances that have constantly emerging new drugs and changing availability. The previous list of examples continues to be prohibited, but are currently used less commonly. "Other Cannabimimetics" replaced these examples.
- **Cannabidiol is no longer prohibited. Synthetic cannabidiol is not a cannabimimetic, however, cannabidiol extracted from cannabis plants may also contain varying concentrations of THC, which remains a prohibited substance.**

S9: Glucocorticoids:

- **Examples of commonly used glucocorticoids were added for greater clarity.**

Steroids, Stimulants, Glucocorticoids, Diuretics and contaminated stimulants are all categories of substances a few squash athletes have used. It is critical that advice is sought if any medication is considered for use. Always refer to the Prohibited List – if the nomenclature of the drugs is difficult to understand, ask an expert.

Avoid any supplements. They are non-regulated, have questionable manufacturing processes, there is no requirement for correct identification of ingredients and can easily be contaminated with a prohibited substance.

Remember, as an athlete you and only you are responsible for what you take.

Dr Anne Smith
Chair WSF Anti-Doping Commission

SUMMARY OF MAJOR MODIFICATIONS AND EXPLANATORY NOTES

2018 PROHIBITED LIST

Substances and methods prohibited at all times (In- and Out-of-Competition)

Prohibited Substances

S1 ANABOLIC AGENTS

- Dihydrotestosterone was renamed to its International Non-proprietary Name (INN) (androstanolone). 1-androsterone (3 α -hydroxy-5 α -androst-1-ene-17-one) was added in S1.a as an example of exogenous anabolic steroid.
- LGD-4033 and RAD140 were added as further examples of SARMs.

S2 PEPTIDE HORMONES, GROWTH FACTORS, RELATED SUBSTANCES AND MIMETICS

- For clarity and accuracy Section S2 was reorganized.
- ARA290 was removed as an example in this section because current literature suggests it does not meet inclusion criteria.
- Deslorelin, goserelin, nafarelin and triptorelin were added as examples of 2.1.
- Growth Hormone fragments were included in 2.3 with AOD-9604 and hGH 176-191 added as examples; CJC-1293 was added as example of GHRH and tabimorelin as a further example of GH secretagogue. GHRP-1, -3, -4, and -5 were added as examples of GHRP.
- Thymosin- β 4 and its derivatives, e. g. TB-500, were added as example of prohibited growth factors.
- Cobalt: It is re-iterated that vitamin B12, which contains cobalt, is not prohibited.

S3 BETA-2-AGONISTS

- Dosing parameters of salbutamol were revised to make it clear that divided doses of salbutamol may not exceed 800 micrograms over any 12 hours (see figure).

**Inhaled salbutamol – max. 1600 mcg over 24 hours
But not to exceed 800 mcg over any 12 hours**

- Tulobuterol was added as an example.
- The statement on the urinary thresholds was improved.

S4 HORMONE AND METABOLIC MODULATORS

- Clomifene is now stated by its INN.
- In the absence of an INN, the IUPAC name of GW1516, 2-[2-methyl-4-[[4-methyl-2-[4-(trifluoromethyl)phenyl]thiazol-5-yl)methylthio]phenoxy] acetic acid as well as an alternative name (GW501516) were included.
- SR9009, a Rev-Erb- α agonist, was added as an example of Activators of the AMP-activated protein kinase (AMPK).

S5 DIURETICS AND MASKING AGENTS

- In consideration of the information published in scientific articles since 2012 that particularly addresses the ability of glycerol to influence the athlete's plasma volume and parameters of the Athlete Biological Passport (ABP), the magnitude of glycerol-derived effects is regarded as minimal. Therefore, glycerol has been removed from the Prohibited List.

Prohibited Methods

M2 CHEMICAL AND PHYSICAL MANIPULATION

- M2.2: the permitted volume and timing of intravenous infusions were changed from infusions of no more than 50 mL per 6-hour period to no more than a total of 100 mL per 12-hour period in order to allow greater flexibility for the safe administration of non-prohibited therapeutic substances, for example, iron.
- To reflect medical practice, "hospital admissions" has been changed to "hospital treatments" and "clinical investigations" has been clarified as "clinical diagnostic investigations".

M3 GENE DOPING

- The definition has been revised to include current and emerging gene manipulating technologies.

Substances and Methods Prohibited In-Competition

S6 STIMULANTS

- 1,3-Dimethylbutylamine was added as an example. This substance can be found in some dietary supplements.

S8 CANNABINOIDS

- The category Cannabimimetics, e.g. "Spice, JWH-018, JWH-073, HU210" was changed to "synthetic cannabinoids, e.g. Δ^9 -tetrahydrocannabinol (THC) and other cannabimimetics". The synthetic cannabinoids are one of the main classes of novel psychoactive substances that have constantly emerging new drugs and changing availability. The previous list of examples continues to be prohibited, but are currently used less commonly. "Other cannabimimetics" replaced these examples.
- Cannabidiol is no longer prohibited. Synthetic cannabidiol is not a cannabimimetic; however, cannabidiol extracted from cannabis plants may also contain varying concentrations of THC, which remains a prohibited substance.

S9 GLUCOCORTICOIDS

- Examples of commonly used glucocorticoids were added for greater clarity.

Substances Prohibited in Particular Sports

P1 ALCOHOL

- After careful consideration and extensive consultation, Alcohol was excluded from the Prohibited List. The intent of this change is not to compromise the integrity or safety of any sport where alcohol use is a concern, but rather to endorse a different means of enforcing bans on alcohol use in these sports. The four International Federations (IF) affected by this change have been alerted sufficiently in advance in order to amend their rules and to put in place protocols to test for alcohol use and appropriately sanction athletes who do not abide by the rules of their sport. Control of the process will allow IF more flexibility in applying rules or thresholds as they see fit. The National Anti-Doping Organizations are no longer obliged to conduct tests but may assist IF and National Federations where appropriate.

P2 BETA BLOCKERS

- For logical consistency, the category known as P2. Beta Blockers was renamed P1. Beta Blockers.

MONITORING PROGRAM

The following were added to evaluate misuse in sport:

- 2-ethylsulfanyl-1H-benzimidazole (bemitil) *in- and out-of-competition*
- Hydrocodone *in-competition*.

Mitragynine and telmisartan were removed from the Monitoring Program because the required information on prevalence was obtained.
